FusionEQ

DEAL READINESS INTELLIGENCE

Decision evidence. Readiness clarity. Better next moves.

FusionEQ Deal Readiness Report

Three calibrated readiness reports showing how FusionEQ separates recorded activity from decision evidence, scores readiness, identifies the dominant pattern, and names the next move.

ENTERPRISE TEAM A	ENTERPRISE TEAM B	ENTERPRISE TEAM C
90	**31**	**43**
Strong readiness	Incomplete readiness	Incomplete readiness

Purpose

This file shows the client-ready Deal Readiness Report output for three benchmark deals. The Diagnostic Deal Briefing Analysis remains the deeper working artifact; this report is the polished readiness deliverable.

FUSIONEQ DEAL READINESS REPORT 01

Deal Readiness Report

Deal Memory ID: Enterprise Team A / JR / 201

> **FusionEQ does not replace judgment. It sharpens it.**

1. Report Identity

Deal Memory ID	Enterprise Team A / JR / 201
Report Type	FusionEQ Deal Readiness Report
Report Date	May 19, 2026
Source	Information-provided calibration context
Privacy Note	Uses anonymized company or team identifier, initials, and number for calibration.

2. Executive Readiness Read

READINESS POSITION

90 / Strong

PRIMARY PATTERN

Strong But Still Needs Forecast Discipline

PRIMARY CLARITY NEEDED

Final signature execution

VISIBLE SIGNAL

Economic buyer attended the last two meetings. Finance attended the business-case review. Legal started redlines.

FUSIONEQ READ

Strong But Still Needs Forecast Discipline. The current forecast confidence is supported by decision evidence, not simply by positive sentiment or internal belief. The remaining readiness question is execution discipline: whether the final approval gates, signature timing, and implementation dependencies remain aligned through close.

BETTER MOVE

Run a formal close-plan validation review with procurement, legal, and the economic buyer.

3. Information Provided / FusionEQ Interpretation

INFORMATION PROVIDED

The information provided described a late-stage deal context in which the economic buyer had attended the last two meetings, finance had reviewed the business case, procurement had confirmed the signer and approval sequence, and legal redlines had started.

The information also indicated that the buyer returned a mutual action plan with dates, owners, and target signature timing, and that the champion had introduced operations and finance into the process.

The current team belief was that the deal belonged in Commit because buyer participation, approval sequencing, and legal movement all appeared to support close readiness.

FUSIONEQ INTERPRETATION

Readiness: 90 / Strong

Pattern: Strong But Still Needs Forecast Discipline

Forecast Read: Supported

Primary Clarity Needed: Final signature execution

4. Executive Readiness Summary

Enterprise Team A shows a high-readiness deal because the buyer has moved beyond interest into decision evidence. The economic buyer has participated directly, finance has reviewed the business case, procurement has confirmed the signer and approval sequence, legal redlines have started, and the buyer returned a mutual action plan with dates, owners, and target signature timing.

The current forecast confidence is supported by decision evidence, not simply by positive sentiment or internal belief. The remaining readiness question is execution discipline: whether the final approval gates, signature timing, and implementation dependencies remain aligned through close.

The recommended next move is to run a formal close-plan validation review with procurement, legal, and the economic buyer to confirm remaining approval gates, signature timing, implementation dependencies, and any final execution blockers.

5. Deal Snapshot

Current Stage	Late-stage commercial validation
Forecast Read	Supported
Current Next Step	Close-plan validation review
Stakeholder Coverage	Economic buyer, finance, operations, procurement, legal, champion
Decision Owner	Evidenced through economic buyer involvement
Approval Path	Confirmed by procurement
Buyer-Owned Movement	Mutual action plan returned with dates and owners

Team belief: The current team belief is that the deal belongs in Commit because the buying organization has evidenced decision ownership, approval sequencing, finance participation, legal progress, and buyer-owned milestone movement.

6. Readiness Score

OVERALL DEAL READINESS	ALIGNMENT	CONTROL	MOMENTUM
90	88	91	90
Strong	Strong	Strong	Strong

Score Interpretation

Alignment scored 88 because the economic buyer, finance, operations, and procurement are operating around the same business driver: board-level cost reduction timing this quarter.

Control scored 91 because the signer and approval sequence have been confirmed, the economic buyer is engaged, and procurement has clarified the path rather than merely requesting paperwork.

Momentum scored 90 because the buyer is carrying decision work forward: returning the mutual action plan, initiating legal redlines, coordinating internal stakeholders, and asking implementation timing questions.

RECOMMENDED NEXT MOVE

Run a formal close-plan validation review with procurement, legal, and the economic buyer.

The conversation should confirm remaining approval gates, signature timing, implementation readiness dependencies, and any final execution blockers.

The evidence needed is confirmation that the existing buyer-owned plan still reflects the buyer's actual internal approval path and current-quarter execution intent.

7. Decision Readiness Overview

Alignment is strong because the economic buyer, finance, operations, and procurement are operating around the same business driver: board-level cost reduction timing this quarter.

Control is strong because the signer and approval sequence have been confirmed, the economic buyer is engaged, and procurement has clarified the path rather than merely requesting paperwork.

Momentum is strong because the buyer is carrying decision work forward: returning the mutual action plan, initiating legal redlines, coordinating internal stakeholders, and asking implementation timing questions.

8. What Has Been Evidenced

- Economic buyer engagement across multiple meetings
- Board-level business driver tied to current-quarter cost reduction
- Finance participation in business-case review
- Finance questions focused on implementation timing rather than concessions
- Procurement-confirmed signer and approval sequence
- Legal redlines initiated
- Buyer-owned mutual action plan returned with dates, owners, and target signature date
- Champion coordinating internal follow-up and expanding stakeholder involvement
- Operations and finance introduced into the process
- Buyer-owned momentum and coordinated internal movement

9. What Remains Unproven

- Final signature execution
- Completion of all internal approvals on the expected timeline
- Implementation timing dependencies through final approval
- Whether any final commercial or legal issue could alter timing

10. Key Readiness Signals

Recorded Activity

- Economic buyer attended the last two meetings
- Finance attended the business-case review
- Legal started redlines
- Procurement confirmed signer and approval sequence
- Buyer returned the mutual action plan
- Champion introduced operations and finance

Decision Evidence

- Decision ownership is evidenced through economic buyer participation
- Approval path is evidenced through procurement confirmation
- Buyer-owned momentum is evidenced through returned mutual action plan
- Cross-functional alignment is evidenced through finance and operations participation
- Legal progression is evidenced through active redlines
- Business timing is evidenced by board-level cost-reduction target

11. Identified Pattern

Strong But Still Needs Forecast Discipline

This pattern matters because forecast confidence should follow decision evidence, not activity volume or positive sentiment alone.

12. Buyer-Owned Momentum Read

Buyer-owned momentum is strongly evidenced. The buyer has not only responded to team activity; the buyer has created structure, returned a dated plan, named owners, introduced functional stakeholders, and advanced legal review.

The current deal should be managed as an execution path rather than a discovery or persuasion path. The deal team's work is to protect readiness, confirm timing, and prevent late-stage drift.

13. Decision Ownership Read

Decision ownership is verified at a high level. The economic buyer is participating, procurement has confirmed the signer, and the approval sequence is known.

The remaining ownership question is not who owns the decision, but whether each final approval dependency has an accountable owner and confirmed date.

14. Alignment and Urgency Read

Alignment appears strong across economic, financial, operational, procurement, and legal dimensions. The business driver is tied to current-quarter board-level cost reduction, which gives the deal a credible urgency basis.

Urgency is buyer-owned because the timing pressure is connected to the buyer's business objective rather than team-created close pressure.

15. Forecast Confidence Read

Supported

Forecast confidence should remain tied to what the buyer has evidenced through ownership, alignment, approval movement, and buyer-owned next steps.

16. Recommended Next Move

> Run a formal close-plan validation review with procurement, legal, and the economic buyer.
>
> The conversation should confirm remaining approval gates, signature timing, implementation readiness dependencies, and any final execution blockers.
>
> The evidence needed is confirmation that the existing buyer-owned plan still reflects the buyer's actual internal approval path and current-quarter execution intent.

17. Leadership Questions to Test

- What final approval gates remain between redlines and signature?
- Who owns each remaining gate and date on the buyer side?
- What implementation dependency could alter signature timing?
- What must be true for finance, legal, and procurement to remain aligned through close?
- What buyer action will confirm the current-quarter timeline is still intact?

18. Deal Coach Guidance

FusionEQ Coach is optional for this deal. It could help optimize final negotiation language and close orchestration, but the deal does not currently require structural recovery coaching.

Use Coach if the deal team needs help preparing the close-plan validation conversation or handling final approval objections without reopening the deal.

---

19. Appendix / Signal Detail

No score cap was required because Alignment, Control, and Momentum are all supported by decision evidence.

The readiness score should remain high unless buyer-owned dates slip, legal stalls, finance reopens commercial terms, or the economic buyer disengages.

This is an example of forecast confidence supported by decision readiness rather than activity volume.

FUSIONEQ DEAL READINESS REPORT 02

Deal Readiness Report

Deal Memory ID: Enterprise Team B / TS / 202

FusionEQ does not replace judgment. It sharpens it.

1. Report Identity

Deal Memory ID	Enterprise Team B / TS / 202
Report Type	FusionEQ Deal Readiness Report
Report Date	May 19, 2026
Source	Information-provided calibration context
Privacy Note	Uses anonymized company or team identifier, initials, and number for calibration.

2. Executive Readiness Read

READINESS POSITION
31 / Incomplete

PRIMARY PATTERN
False Momentum

PRIMARY CLARITY NEEDED
Budget ownership

VISIBLE SIGNAL

Eight meetings have occurred. Many emails have been exchanged. Demo feedback has been positive.

FUSIONEQ READ

False Momentum. The current interpretation should be corrected. Engagement is real, but it is not yet evidence that the organization is moving toward a purchase decision. Additional product deep dives may increase activity while leaving the readiness questions unresolved.

BETTER MOVE

Pause additional technical expansion until the champion validates who owns budget authority, who controls the decision, what business problem is important enough to fund, and what criteria will determine approval.

3. Information Provided / FusionEQ Interpretation

INFORMATION PROVIDED

The information provided described a deal context with high visible engagement: eight meetings, frequent email activity, positive demo feedback, continuing technical questions, and a champion who said the team liked the platform.

The information also indicated that end users requested another product deep dive, but did not include evidence of budget ownership, procurement involvement, executive sponsorship, finance alignment, approval criteria, or a confirmed decision path.

The current team belief was that the deal was progressing because activity, sentiment, and product interest remained high.

FUSIONEQ INTERPRETATION

Readiness: 31 / Incomplete

Pattern: False Momentum

Forecast Read: Overextended

Primary Clarity Needed: Budget ownership

4. Executive Readiness Summary

Enterprise Team B shows high activity but limited decision readiness. The deal has meetings, emails, technical interest, and positive demo sentiment, but the evidence does not prove budget ownership, decision authority, procurement involvement, finance alignment, executive sponsorship, approval criteria, or buyer-owned progression.

The current interpretation should be corrected. Engagement is real, but it is not yet evidence that the organization is moving toward a purchase decision. Additional product deep dives may increase activity while leaving the readiness questions unresolved.

The recommended next move is to pause further technical expansion until the champion validates budget ownership, decision control, approval criteria, and the internal step that would convert user interest into decision movement.

5. Deal Snapshot

Current Stage	Product evaluation activity
Forecast Read	Overextended if treated as progressing
Current Next Step	Another product deep dive requested by end users
Stakeholder Coverage	Champion and end users, with authority functions absent
Decision Owner	Unverified
Approval Path	Unproven
Buyer-Owned Movement	Not evidenced

Team belief: The current team belief is that the deal is progressing because engagement is high: eight meetings, many emails, strong demo feedback, technical questions, and positive champion sentiment.

6. Readiness Score

OVERALL DEAL READINESS	ALIGNMENT	CONTROL	MOMENTUM
31	**38**	**24**	**33**
Incomplete	Fragmented	Unverified	Stalled

Score Interpretation

Alignment scored 38 because interest exists among users, but there is no evidence that economic, financial, executive, procurement, or approval stakeholders share the same decision criteria.

Control scored 24 because no budget owner, decision authority, procurement path, or executive sponsor has been confirmed.

Momentum scored 33 because the next step is more product evaluation, not buyer-owned decision movement.

RECOMMENDED NEXT MOVE

Pause additional technical expansion until the champion validates who owns budget authority, who controls the decision, what business problem is important enough to fund, and what criteria will determine approval.

Require a stakeholder-mapping conversation before continuing deeper product evaluation cycles.

The evidence needed is a named decision owner, validated criteria, and a buyer-owned internal action that moves beyond product interest.

7. Decision Readiness Overview

Alignment is fragmented because interest exists among users, but there is no evidence that economic, financial, executive, procurement, or approval stakeholders share the same decision criteria.

Control is unverified because no budget owner, decision authority, procurement path, or executive sponsor has been confirmed.

Momentum is stalled from a decision-readiness perspective because the next step is more product evaluation, not buyer-owned decision movement.

8. What Has Been Evidenced

- Strong end-user engagement
- Multiple technical conversations
- Positive demo sentiment
- Repeated stakeholder interaction
- Continued product interest
- Champion accessibility

9. What Remains Unproven

- Budget ownership
- Economic buyer involvement
- Decision criteria
- Procurement participation
- Finance alignment
- Executive sponsorship
- Approval process
- Business urgency
- Buyer-owned progression
- Decision timeline

10. Key Readiness Signals

Recorded Activity

- Eight meetings have occurred
- Many emails have been exchanged

- Demo feedback has been positive
- Technical questions have continued
- Champion says the team likes the platform
- End users requested another product deep dive

Decision Evidence

- Product interest is evidenced
- End-user engagement is evidenced
- Champion access is evidenced
- Decision ownership is not evidenced
- Budget authority is not evidenced
- Approval criteria are not evidenced

11. Identified Pattern

False Momentum

This pattern matters because forecast confidence should follow decision evidence, not activity volume or positive sentiment alone.

12. Buyer-Owned Momentum Read

Buyer-owned momentum is not yet evidenced. The buyer is engaging with product information, but there is no validated internal movement toward budget approval, authority alignment, procurement review, or decision criteria.

The deal is being maintained through activity. It is not yet progressing through decision structure.

13. Decision Ownership Read

Decision ownership is the primary constraint. The deal lacks validated budget ownership, approval authority, and decision control.

The champion may be supportive, but support is not the same as ownership. Until the champion can name who controls budget and approval, the deal should remain in an incomplete readiness state.

14. Alignment and Urgency Read

Alignment is currently concentrated around product interest rather than organizational commitment. End users may like the platform, but the business case, budget path, and executive priority are not yet evidenced.

Urgency is not buyer-owned. The current next step creates more product knowledge, but it does not create decision evidence.

15. Forecast Confidence Read

Overextended

Forecast confidence should remain tied to what the buyer has evidenced through ownership, alignment, approval movement, and buyer-owned next steps.

16. Recommended Next Move

> Pause additional technical expansion until the champion validates who owns budget authority, who controls the decision, what business problem is important enough to fund, and what criteria will determine approval.
>
> Require a stakeholder-mapping conversation before continuing deeper product evaluation cycles.
>
> The evidence needed is a named decision owner, validated criteria, and a buyer-owned internal action that moves beyond product interest.

17. Leadership Questions to Test

- What has the buyer done that proves movement toward a decision, not just interest in the product?
- Who owns budget authority for this purchase?
- What decision criteria will determine approval?
- Why is another product deep dive the right next step if decision ownership is still unverified?
- What buyer-owned action would prove this deal is progressing?

18. Deal Coach Guidance

Use FusionEQ Coach next. The deal team needs conversation strategy, buyer-facing language, and stakeholder expansion planning to shift the deal from user engagement into decision validation.

Recommended Coach focus: champion testing, budget ownership discovery, stakeholder map creation, and language for pausing product expansion until decision structure is clarified.

---

19. Appendix / Signal Detail

Control is capped because no decision authority, budget owner, or approval path has been evidenced.

Momentum is capped because buyer activity is product engagement, not decision movement.

The overall readiness score should remain low until the buyer names ownership, criteria, and an internal decision step.

FUSIONEQ DEAL READINESS REPORT 03

Deal Readiness Report

Deal Memory ID: Enterprise Team C / AL / 203

> **FusionEQ does not replace judgment. It sharpens it.**

1. Report Identity

Deal Memory ID	Enterprise Team C / AL / 203
Report Type	FusionEQ Deal Readiness Report
Report Date	May 19, 2026
Source	Information-provided calibration context
Privacy Note	Uses anonymized company or team identifier, initials, and number for calibration.

2. Executive Readiness Read

READINESS POSITION	PRIMARY PATTERN	PRIMARY CLARITY NEEDED
43 / Incomplete	**Confidence Without Evidence**	**Risk committee approval**

VISIBLE SIGNAL

Forecast is currently Commit. Procurement requested final pricing. Procurement requested vendor forms.

FUSIONEQ READ

Confidence Without Evidence. The signer is known and procurement is active, which gives the deal more control evidence than Enterprise Team B. However, legal has not started, risk committee approval is incomplete, the CIO has been absent from recent calls, finance reduced budget, and finance has raised delay timing. Those conditions materially constrain readiness.

BETTER MOVE

Secure a direct decision-readiness review involving the champion and executive sponsor.

3. Information Provided / FusionEQ Interpretation

INFORMATION PROVIDED

The information provided described a late-stage deal context in which procurement requested final pricing and vendor forms, the signer was known, and the champion described the deal as basically done.

The information also included counter-signals: legal had not started because risk committee approval was incomplete, the CIO had been absent from the last three calls, finance had reduced budget, and finance had asked whether the purchase could delay to next quarter.

The current team belief was that the deal would close this month because procurement activity and signer visibility appeared to support a Commit forecast.

FUSIONEQ INTERPRETATION

Readiness: 43 / Incomplete

Pattern: Confidence Without Evidence

Forecast Read: Overextended

Primary Clarity Needed: Risk committee approval

4. Executive Readiness Summary

Enterprise Team C is a late-stage overconfidence deal. Procurement activity and champion optimism create the appearance of close proximity, but the current decision evidence does not support Commit-level confidence for this month.

The signer is known and procurement is active, which gives the deal more control evidence than Enterprise Team B. However, legal has not started, risk committee approval is incomplete, the CIO has been absent from recent calls, finance reduced budget, and finance has raised delay timing. Those conditions materially constrain readiness.

The recommended next move is a direct decision-readiness review with the champion and executive sponsor to validate risk committee timing, budget commitment, current-quarter priority, legal initiation conditions, and realistic signature timing.

5. Deal Snapshot

Current Stage	Late-stage operational activity
Forecast Read	Overextended if held at Commit
Current Next Step	Decision-readiness review
Stakeholder Coverage	Champion, procurement, finance, prior CIO support, signer known
Decision Owner	Partially evidenced through signer visibility
Approval Path	Incomplete because risk committee and legal are not cleared
Buyer-Owned Movement	Not currently evidenced at close-ready level

Team belief: The current team belief is that the deal will close this month because procurement requested final pricing and vendor forms, the signer is known, and the champion says it is basically done.

6. Readiness Score

OVERALL DEAL READINESS	ALIGNMENT	CONTROL	MOMENTUM
43	**47**	**58**	**39**
Incomplete	Partial	Partial	Stalled

Score Interpretation

Alignment scored 47 because procurement and the champion are active, but finance has reduced budget and asked about delay timing while current executive sponsorship evidence has faded.

Control scored 58 because the signer is known, but the approval path is not fully verified. The risk committee condition and legal delay limit control confidence.

Momentum scored 39 because procurement requests are not enough to prove current-quarter execution when legal has not started and finance is questioning timing.

RECOMMENDED NEXT MOVE

Secure a direct decision-readiness review involving the champion and executive sponsor.

The review should test risk committee timing, budget commitment status, current-quarter prioritization, legal initiation conditions, and realistic signature timing.

The objective is to validate whether the organization still intends to execute this quarter or is actively shifting the purchase timeline.

7. Decision Readiness Overview

Alignment is partial because procurement and the champion are active, but finance has reduced budget and asked about delay timing while current executive sponsorship evidence has faded.

Control is partial because the signer is known, but the approval path is not fully verified. The risk committee condition and legal delay limit control confidence.

Momentum is stalled from a readiness perspective because procurement requests are not enough to prove current-quarter execution when legal has not started and finance is questioning timing.

8. What Has Been Evidenced

- Procurement engagement
- Final pricing discussions
- Vendor form requests
- Signer identified
- Earlier CIO support
- Champion optimism
- Existing late-stage operational activity

9. What Remains Unproven

- Risk committee approval
- Executive sponsorship continuity
- Current CIO commitment
- Budget stability
- Close timing
- Buyer-owned urgency
- Legal progression timing
- Internal prioritization for current-quarter execution

10. Key Readiness Signals

Recorded Activity

- Forecast is currently Commit
- Procurement requested final pricing
- Procurement requested vendor forms

- Champion says it is basically done
- Legal has not started because risk committee approval is not complete
- CIO has been absent from the last three calls
- Finance reduced budget
- Finance asked whether the purchase can delay to next quarter
- Signer is known but timing is not confirmed

Decision Evidence

- Signer visibility is evidenced
- Procurement process activity is evidenced
- Some prior executive support is evidenced
- Final pricing and vendor form activity are evidenced
- Current approval readiness is not evidenced
- Current-quarter execution intent is not evidenced

11. Identified Pattern

Confidence Without Evidence

This pattern matters because forecast confidence should follow decision evidence, not activity volume or positive sentiment alone.

12. Buyer-Owned Momentum Read

Buyer-owned momentum is not sufficiently evidenced for a current-month close. Procurement is moving paperwork, but approval readiness has not caught up to the forecast.

The deal may still be viable, but the current signal set points to an incomplete approval state rather than a clear close path.

13. Decision Ownership Read

Decision ownership is partially evidenced because the signer is known. However, ownership is not the same as approval readiness.

The deal still needs proof that the signer, risk committee, finance, legal, and executive sponsor are aligned around current-quarter execution.

14. Alignment and Urgency Read

Alignment is incomplete. Champion optimism and procurement movement are offset by finance budget reduction, finance delay questions, incomplete risk committee approval, and current CIO absence.

Urgency is not yet buyer-owned at close-ready strength. If finance is asking about next-quarter delay, current-quarter urgency must be revalidated.

15. Forecast Confidence Read

Overextended

Forecast confidence should remain tied to what the buyer has evidenced through ownership, alignment, approval movement, and buyer-owned next steps.

16. Recommended Next Move

> Secure a direct decision-readiness review involving the champion and executive sponsor.
>
> The review should test risk committee timing, budget commitment status, current-quarter prioritization, legal initiation conditions, and realistic signature timing.
>
> The objective is to validate whether the organization still intends to execute this quarter or is actively shifting the purchase timeline.

17. Leadership Questions to Test

- Has risk committee approval been scheduled, completed, or delayed?
- Does finance still support current-quarter execution after reducing budget?
- Who will re-engage the CIO or executive sponsor to confirm priority?
- What exact condition must be met before legal starts?
- What buyer-owned action would prove this is still a current-month close?

18. Deal Coach Guidance

Use FusionEQ Coach next. The deal team needs executive re-engagement strategy, forecast recalibration language, and buyer-facing conversation planning to test true close readiness.

Recommended Coach focus: how to challenge the Commit assumption professionally, how to discuss delay signals without sounding alarmist, and how to re-anchor the buyer around approval evidence.

---

19. Appendix / Signal Detail

Momentum is capped because legal has not started and risk committee approval is incomplete.

Overall readiness is capped because procurement activity does not override finance delay signals, budget reduction, and current executive sponsorship gaps.

The forecast should not be treated as Commit-supported until approval readiness and current-quarter execution intent are evidenced.
